FFV Goes Off-Road

Fast Forward Video's Outrider CF DVR is being used by Inertia Unlimited, a provider of specialty camera systems to network television, in its CF solid-state recorder. Last month, the recorder was used for in-vehicle recording in the CORR (Championship Off Road Racing) Off-Road Truck Series in Crandon, WI.

Inertia Unlimited's CF recorder weighs a mere 0.62 pounds and measures only 6" x 3" x 0.82". The exterior housing is composed of anodized machined aluminum for rugged environments, and its video connectors are pin-compatible with a Sony Handycam. Utilizing FFV's Outrider, the recorder features video capture and playback at 60 fields per second and offers a resolution greater than 550 lines at 4:1 compression.
